EZSMOKE

Simply The Fastest, Most Effective and Accurate Method For Low Pressure Leak Testing!

EZSMOKE CE-9i Leak Detection System

EZSMOKE allows a technician to use low pressure, non-toxic smoke, with a pleasant lemon scent and UV dye, to quickly locate annoying sewer gas leaks that are often difficult and time consuming to find in cuts, cracks, fractures, punctures, porosity or unsealed fittings inside or outside residential or commercial buildings.

EZSmoke uses patented technology to send non-toxic smoke containing a trace dye (UltraTrace UV) through the air (not a liquid) that is contained within pipes, wall cavities, or other forms of enclosed spaces. Any visible smoke immediately provides an indication of a large leak.

If white smoke alone does not locate the source of sewer gas odor, technicians can rely on UltraTrace UV, that is carried within the smoke vapor, to pinpoint the source of very small leaks of annoying sewer gas.

Patented in the U.S. and foreign countries.

Dye Marks the Spot

EZSMOKE patented UltraTraceUV® dye travels with the white smoke and settles outside most leaks in the system. The included UV light UltraTraceUV® dye pinpoints the exact location of any leak.

Fast, Verifiable Results

EZSMOKE provides fast, verifiable results and easy testing of all repairs. After locating and repairing any leaks run a pressure decay test on the system again. If no pressure decay is found, all repairs are successful.

Take Control With TankTracker™

INVENTORY | COSTS | RECORD-KEEPING | USAGE | LOCATION

Supply and recovery tank inventory management system exclusively from CPS

The Tank Tracker™ feature (Patent Pending), developed by CPS Products, Inc., provides a convenient way to manage and track your inventory of refrigerant supply and recovery tanks in the field.

Tank Tracker is included within the CPS Link app (U.S. Patent # 9,043,061), and it allows technicians to set up an electronic inventory of all their supply and recovery tanks. Information such as tank size, type and amount of refrigerant contained in each can be entered.

Tank Tracker will then record the addition or subtraction of refrigerant from a tank, along with the date, place and time the tank was used, as well as the name of the job and the customer it was used for. All of this information can be e-mailed to clients, technicians, a home office, or others.

The Tank Tracker feature is available when the CPS Link app has been activated, and any CPS wireless scale has been paired to a mobile device. This allows technicians to perform programmable charging or recovery.

For automatic charging or recovery, pair any CPS wireless scale and the SVW Wireless Solenoid Valve to a mobile device running the CPS Link app. The SVW will turn ON or OFF to automatically control refrigerant flow.

Tank Tracker Screen

Track who, when, where and how much refrigerant is used on every job

Track who, when, where and how much refrigerant is used on every job

SVW Wireless Solenoid Valve

The SVW is a compact, battery operated solenoid valve with 1/4" SAE IN/OUT male ports that open and close in 100 milliseconds to control refrigerant flow. Operate it manually, or in automatic mode for more precise control. Works with all CPS wireless scales using our patented CPS Link™ technology.

- Operate manually for instantaneous On/Off control of refrigerant.
- Or, pair to any CPS wireless scale for automatic, precise control of refrigerant during service routines.
- Saves time, reduces cost and extends service equipment life
- Compatible with all common CFC, HFC, HCFC refrigerants and blends
- Operates with CPS Link app

HOW THE MT69/ MT69SS MOLECULAR TRANSFORMATOR WORKS:

The effects of ambient temperature and elevated tank pressures on the speed of the refrigerant recovery process are in many cases more important than the speed of the recovery machine itself. As ambient temperature increases, pressure in the recovery cylinder increases, reducing the recovery speed and in many cases can lead to a high pressure shutdown as the recovery equipment and tank pressure limits are reached. The Molecular Transformator reduces the temperature and pressure of recovered refrigerant during the recovery process, dramatically improving the recovery speed and high ambient temperature performance of all commercially available recovery machines in addition to extending the life of the equipment.

MOLECULAR TRANSFORMATOR

MT69SS

With stainless steel coil- for use on refrigerant systems utilizing Class A1, A2, A2L and A3 refrigerants

REFRIGERANT CYLINDER HEATER STRAPS

Charge faster in cold weather!

Ideal for use on portable refrigerant charging or recovery tanks, especially in cold weather when transfer times increase, or when a tank is low on refrigerant. These durable straps create a positive pressure between the refrigerant tank and an A/C or refrigeration system, reducing refrigerant transfer time.

ANTI-SIPHON VALVE KITS

The CPS anti-siphon valve is an essential accessory to any vacuum pump application. The anti-siphon valve prevents the cross-contamination of vacuum pump oil and the compressor oil in the A/C or refrigeration system being serviced. Mixing of vacuum pump oil and compressor oil can cause premature failure in the A/C or refrigeration system. CPS makes three models that fit all CPS and other brands of vacuum pumps.

Home Balancing Valves constrain airflow to precise factory calibrated volumes as marked on the front of the valve.

ABMHBK & ABMHBV Series

Home Balancing Valves

Traditional airflow balancing devices cannot respond to system changes. Too much ventilation means wasted energy, while too little ventilation leads to poor air quality.

CPS Home Balancing Valves are designed to maintain a constant, accurate airflow volume when installed in residential forced air ductwork.

Each Home Balancing Valve has an engineered damper calibrated to automatically adjust to varying pressures, which gives the airflow valves true pressure independence. This leads to greater comfort, saves energy and improves indoor air quality.

Features

- Eliminates hot/cold areas in your home
- Provides greater comfort
- Reduces energy use
- Improves indoor air quality
- Easy to set airflow volumes

Applications

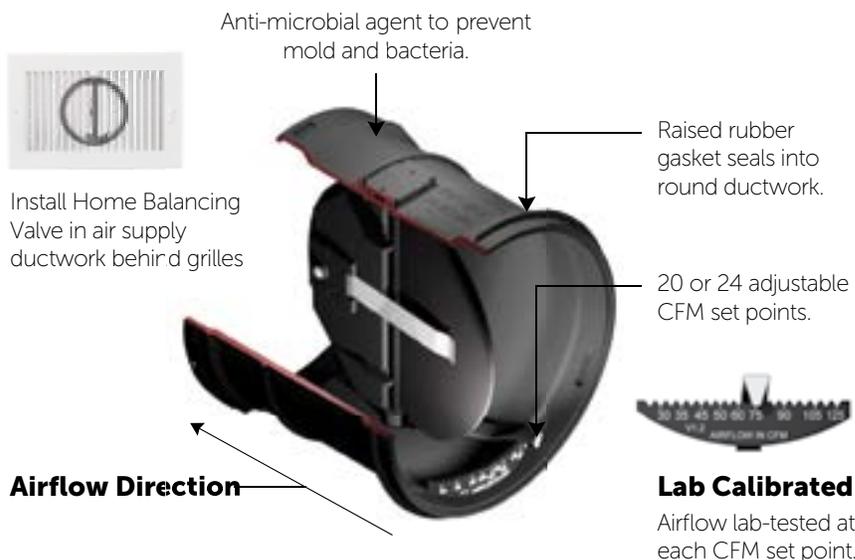

- Precise airflow regulation in forced air ventilation systems in residential buildings.
- Automatic balancing of supply grilles in residential forced air heating and cooling systems.
- Any HVAC application with a static pressure between 0.2 and 2.0 inches w.c.
- For temperatures ranging from 25° to 150°F (-4° to 65°C)

Typical Uses

Multi-family condos, apartments, hotels, dorms, state energy efficiency programs, housing projects, assisted living facilities.

Use the convenient "Room Airflow Calculator" within the CPS Link app to help determine the size of Home Balancing Valve to use in each room of your home.

Smart Air Quality Solutions

The industry's first smart tool that helps HVAC professionals identify indoor air quality issues, determine potential causes and recommend and provide effective solutions.

IAQ PRO SmartAir Smart Indoor Air Quality Meter

The industry's first smart tool that helps HVAC professionals identify indoor air quality issues, determine potential causes, and recommend and provide effective solutions. The IAQ SmartAir™ diagnostic program is designed for the residential market, but has the accuracy and performance to measure indoor air quality in commercial environments as well.

Become an air quality professional

Independent sensors automatically test for: Volatile organic compounds, particulate matter, combustible & non-combustible gases, temperature, humidity, static pressure. The technician now has objective, numerical air quality data.

Sell additional products and services

The CPS Link app generates a customizable report of products, services and prices for the technician to resolve any air quality problems.

Instantly share a job snap-shot

The CPS Link app automatically logs jobsite readings for instant e-mailing to clients, company office, others. This data validates that an analysis was performed.

4 Sensors Inside

VOC's - Detects the presence of Volatile Organic Compounds (chemical pollution) commonly given off by interior building materials such as carpet, paint, upholstery, vinyl flooring, cleaning products, cosmetics, burning wood etc.

NDIR (Non-Dispersive Infrared) - Detects combustible gases and non-combustible inert gases (carbon dioxide, nitrogen, etc.) any of which may pose a threat to humans if found in high enough concentrations inside a home or business.

Particulate Matter (2.5PM-10.0PM) - Measures the amount of inhalable particle matter that can penetrate the lungs and cause health problems. Examples include dust, pet dander, pollen and other airborne allergens with a diameter below 2.5 and 10 microns.

Temperature, Humidity and Pressure - Measures indoor air temperature (in °F or °C), relative humidity (%) and atmospheric pressure (in Hg, atm, kPa, or mb units).

Operation

Pair this meter to a wireless smart device running the CPS Link app. Place it on an interior surface to begin air diagnostics. LED lights on the housing will change color (Red-Yellow-Green) based on air quality conditions found. The CPS Link app will create a customizable, consumer friendly report showing analysis results. The report can be viewed on screen, printed or e-mailed as a PDF.

TLMKC18 Solenoid Magnet

The **TLMKC18** is designed to manually open solenoid valves by magnetically lifting the stem assembly and plunger. Simply slide the **TLMKC18** over the valve's enclosing tube and the industrial grade magnets incorporated inside the rugged ABS plastic housing does the rest. It is an ideal tool for trouble shooting/servicing both direct connected or pilot operated 2-way solenoid, 3-way reclaim or 4-way reversing valves.

- 0.75"/18 mm opening fits all common manufactured valves

TLMAG1 Compact Magnetizer/Demagnetizer

Use the **TLMAG1** to magnetize tools in order to keep small screws and nuts in position, especially helpful when working in confined spaces. Or demagnetize tools when working on or near electronic circuit boards. Simply insert a screwdriver or nut driver into the (+) opening, slowly draw it out and it's magnetized. Leave the magnetizer on the tool for extra strength. To demagnetize, slowly draw the tool through the smallest area of the (-) opening.

- Instantly magnetize or demagnetize steel tools & parts
- Incorporates two C5 industrial strength magnets
- Impact resistant ABS molded plastic
- No batteries or electricity required
- Compact design: 2" x 2" x 1"

BTLDTW BLACKMAX® Digital Torque Wrench

Ideal for HVAC mini-split installations or where OEM-specified torque settings are critical, the BlackMax digital torque wrench exceeds the capabilities of mechanical-only torque wrenches by offering a variety of user-friendly features in a lightweight, durable and ergonomic housing.

Large display numbers prevent misreading torque data, a common problem when using wrenches without digital displays. View "Peak" and "Track" torque data with audible (tone), visual (LED) and tactile (vibration) "torque alerts" to prevent over-tightening by providing advance warning when approaching or exceeding predefined torque settings. Operates on 2 AAA batteries (included).

- Ensures OEM torque setting compliance
- Ideal for HVAC mini-split installations
- **Jaw opening:** 3/16" to 1-7/16" (5 to 35mm)
- **Torque settings:** Lbf.ft, Lbf.in, N-m, Kgf.m
- Pre-set and actual torque values:- View both same time
- **LED Torque Alerts:** Green= within 50-98%, Red= within 2%
- **Memory Presets:** 5 factory programmed, 5 open to enter custom torque values
- **Track mode:** View real-time torque value during use
- **Peak mode:** Maximum torque value reached is stored temporarily
- **Auto-Off (Selectable):** Conserves battery life
- Backlight display

REDUCES DAMAGING IN-RUSH CURRENT BY UP TO 50%!

5-2-1[®] COMPRESSOR SAVER[®]

Start-up is the most punishing task for any type of electrical equipment due to the surge of current when power is first applied. A/C compressors can consume up to 45,000 watts!

The 5-2-1 Compressor Saver significantly reduces the time the compressor draws high amperage at start-up by combining a powerful multi-layer starting capacitor with a smart switch to safely give the compressor the burst it needs to start up quickly and reliably, while drawing less power. Less power means lower energy bills, too.

- Perfect add-on service for HVAC technicians—high profit, easy and fast to install, and easy to sell.
- Customers experience immediate results.
- Adds years to the life of your compressor and other electrical components associated with your A/C system.
- Reduce damaging in-rush current by up to 50%.
