

Data sheet

Thermostatic Expansion Valves

Type TR6

The TR6 series is a hermetic design which is developed with features especially for use in applications such as:

- Residential air conditioning systems
- Split systems
- Roof top units
- Heat pumps
- Chillers
- Light commercial air conditioning systems

The TR6 design incorporates a forged brass body with the entire power element, including the capillary tube and bulb, fabricated from stainless steel. All valves are designed with balanced port which reduces the influence from varying condensing pressures. The valves can be delivered with special connections and fittings both at the inlet, outlet, and the equalizer connection.

Features

- Compact size - hermetic design, straightway configuration with external equalization
- Refrigerants & rated capacities ranging up to
 - R22/R407C: 23.6 kW / 6.7 TR
 - R410A: 24.5 kW / 7 TR
- Laser-welded power element
 - Longer diaphragm life
 - High corrosion resistant
- Stainless steel capillary tube
 - Tolerates more bending for easier installation and longer life
 - High strength and vibration resistance
- Stainless steel bulb
 - Self aligning
- Balance port design
- A complete program with and without internal check valve
- Internal check valve design with low pressure drop in reverse flow
- Adjustable or non-adjustable superheat, for customer specific factory setting
- Bleed function available
- Solder, chatleff and aeroquip connections
- With external equalization
- UL listed, file SA7200
- Anti hunt bulb charge

Data sheet | Thermostatic expansion valves , type TR6

Valve program Standard versions

Refrigerants:
R22 / R407C and R410A

Packing:
Single or Multipack
Industrial Pack for OEM specific valves only

Operating range:
-10 – 15°C / 15 – 60°F

Versions:
All valves are in straightway versions
With or without internal check valve

Setting:

- Fixed setting:
 - Static superheat in accordance with customers' specifications.
- Adjustable setting:
 - R22 / R407C
 - Factory static superheat of 4 K / 7.2°F R410A
 - Factory static superheat of 3 K / 5.4°F

Standard connections:
Inlet Solder ODF $\frac{3}{8}$ in. x Outlet Solder ODF $\frac{3}{8}$ in.
Eq. Cap. tube flare $\frac{1}{4}$ in., 24.3 in length

Capillary tube length: 800 mm / 31.5 in.

Options on request

Capillary tube lengths(approx.):

- 450 mm / 17.7 in.
- 975 mm / 38.4 in.

Equalizer:

- Copper capillary tube size (approx.): Ø $\frac{1}{8}$ in.

Available configurations:

- Solder ODM $\frac{1}{8}$ in., lengths 9.5 in., 16.9 in., 24.3 in., 31.7 in.
- Solder ODF $\frac{1}{4}$ in., lengths 31.7 in., and 39.1 in.
- Flare nut $\frac{1}{4}$ in., lengths 9.5 in., 16.9 in., 24.3 in., and 31.7 in.

Options for Connections:

Inlet/Outlet:

- Inlet: Solder ODM $\frac{3}{8}$ in., solder ODF $\frac{3}{8}$ in., solder ODF $\frac{1}{2}$ in., Chatleff male $\frac{3}{4}$ in. and aeroquip male $\frac{5}{8}$ in.
- Outlet: Solder ODF $\frac{3}{8}$ in., solder ODF $\frac{1}{2}$ in., solder ODF $\frac{5}{8}$ in., chatleff female $\frac{3}{4}$ in., short and long tail, aeroquip female $\frac{5}{8}$ in., short and long tail.

Technical data

Max. operating temperature

Max. working pressure PS / MWP

- Thermostatic element:
 - R22 / R407C: max. 100°C / 212°F
 - R410A: max. 100°C / 212°F
- Valve body:
110°C / 230°F

45.5 bar / 660 psig

Max. test pressure 47 bar / 680 psig

Identification

Essential valve data is given on the power element.

Main valve data example:

TR6	= Valve type
R410A	= Refrigerant
4.00 TR	= Rated capacity Qnom in Tons of refrigeration
PS 45.5 bar /	= Max. working pressure in
MWP 630 psig	bar and psig
067L5955	= Code number
BC4917D	= Date making (BC=Mexico, week 49, year 2017, weekday D=Thursday)
-10 / +15°C	= Evaporating temperature range in °C
+15 / + 60°F	= Evaporating temperature range in °F

Fig. 1

Design and function

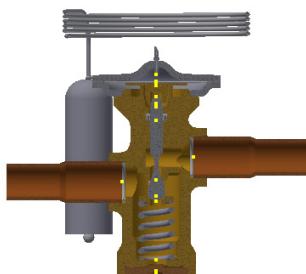

Fig. 2 TR6 with fixed setting

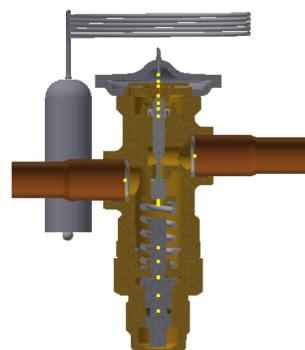

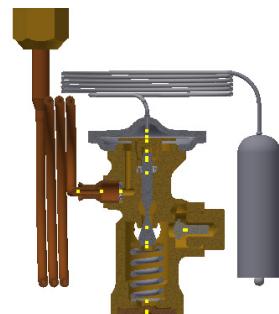

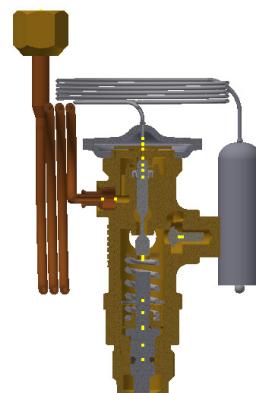

Fig. 3 TR6 with adjustable setting

1. Bulb
2. Thermostatic element
3. Push pin seal
4. Balanced port
5. Check valve
6. Setting spindle for adjustment of static superheat (SS)
7. Equalizer
8. Inlet connection
9. Outlet connection

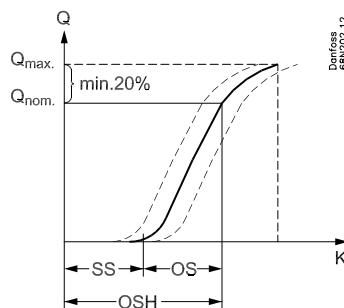

Fig. 4

The central push pin is sealed with a robust seal (pos. 3) that ensures maximum tightness and minimum friction through the lifetime of the valve.

The balanced port (pos. 4) ensures minimal superheat changes when condensing pressure varies. This feature makes the valve ideal for bi-flow operation.

Static superheat (SS) can be adjusted with the setting spindle (see fig. 3, pos. 6).

Terminology (fig.4)

- SS = Static superheat
OS = Opening superheat at nominal/ rated capacity
OSH = SS + OS = Operating superheat

Example

Static superheat
SS = 4 K / 7.2°F (factory setting)
or according to customer specification

Opening superheat at nominal/ rated capacity
OS = 4 K / 7.2°F

Opening superheat is defined as the required superheat to open the valve to nominal capacity

Application

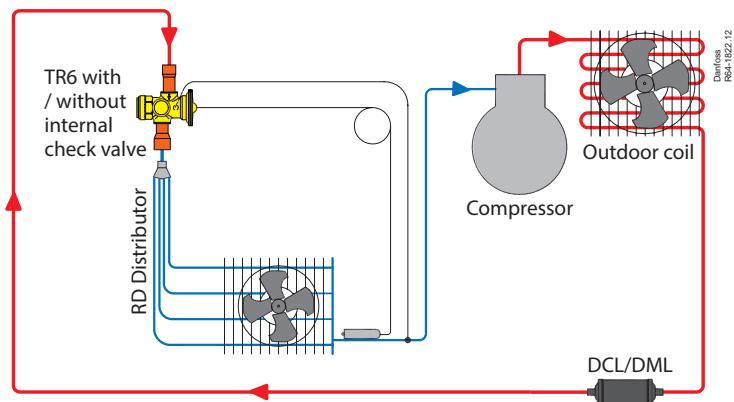

Fig. 5. Traditional air conditioning system, cooling only

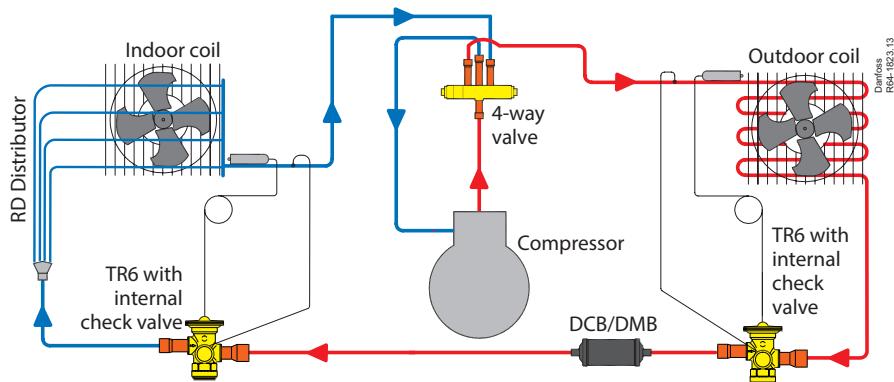

Fig. 6. Traditional air conditioning / heat pump system

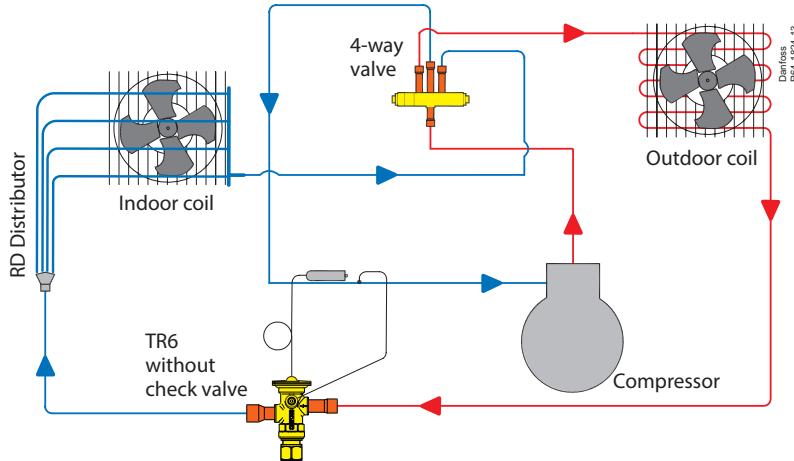

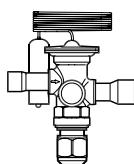

Fig. 7. Simplified air conditioning / heat pump system (bi-flow)

Fig. 5 illustrates the diagram of a traditional air conditioning system where the TR6 is controlling liquid injection in one direction only.

Fig. 6 illustrates a split air conditioning / heat pump system with two thermostatic expansion valves, one for cooling mode and one for heating mode. The thermostatic expansion valves each has a built-in check valve, which has the function of preventing flow in one direction and allowing the flow in the opposite direction. It means that one thermostatic expansion valve is controlling liquid injection into the indoor coil while the other thermostatic expansion valve is bypassing the metering device with the open check valve.

Fig. 7 illustrates a packaged air conditioning / heat pump system with a short distance between the indoor and outdoor heat-exchangers. The two TR6 valves from fig 6 can be replaced by one TR6 valve without internal check valve, making use of the bi-flow feature of this thermostatic expansion valve. The single valve is controlling the liquid injection in both directions. The normal flow direction marked with an arrow on the valve body should be used for the primary function, i.e. cooling or heating.

Ordering
Adjustable setting

Temperature range = -10 -15°C / 15 -60°F, OS = 4 K / 7.2°F

¹⁾The rated capacity is based on:

Evaporating temperature t_e : 4.4 °C / 40 °F
Condensing temperature t_c : 38 °C / 100 °F
Refrigerant temperature ahead of valve t_i : 37 °C / 98 °F

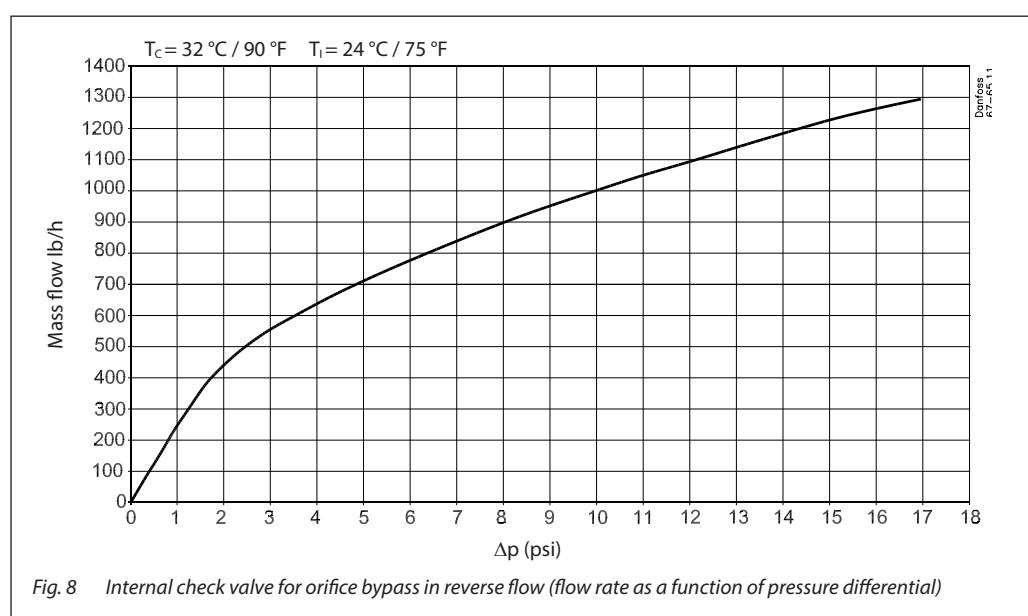

²⁾Kit part numbers consist of a valve, bulb strap, insulation tape, installation guide, and the following connectors:

- 1 Chatleff female 3/4 in. connector
- 1 Aeroquip female 3/8 in. connector
- 1 Flare 3/8 in. connector

TR6 with fixed superheat setting are available upon request.

Single pack = 1 valve kit in a box

Industrial pack = 12 pieces in one box

Note: Insufficient subcooling can produce flash gas.

Correction for subcooling Δt_{sub}

The evaporator capacity used must be corrected if subcooling deviates from 4 K.

The corrected capacity can be obtained by multiplying the evaporator capacity by the correction factor given below.

Capacity correction factor based on Subcooling ' $f_{sub} \Delta t_{sub}$ '

Subcooling [K]	2	4	10	15	20	25	30	35	40	45	50

*) calculated at 32 °C condensing temperature

Sizing

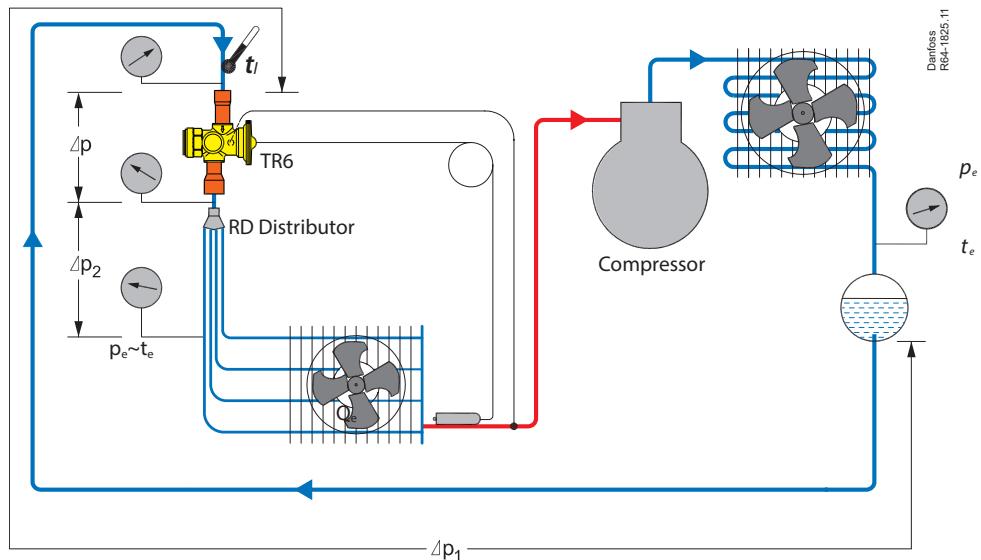

Fig. 9

Example:

Refrigerant

R410A

The corrected evaporator capacity then becomes
 $4.0 \times 1.02 = 4.08 \text{ TR}$

Evaporating temperature

 $t_e = 45^\circ\text{F}$

Condensing temperature

 $p_e = 131 \text{ psig}$
 $t_c = 110^\circ\text{F}$

As the selected valve must be equal to or slightly larger than the corrected evaporator capacity of 4.08 TR, the TR6 with orifice 4 would be a suitable choice. Reference table below for rated capacities.

Liquid line pressure drop in liquid line,

 $p_c = 368 \text{ psi}$

drier and distributor system $\Delta p_2 + \Delta p_1 = 35 \text{ psi}$
 $t_l = 100^\circ\text{F}$

Pressure drop in valve $\Delta p = 368 - 131 - 35$
 $= 202 \text{ psi}$

Subcooling $\Delta t_{\text{sub}} = t_c - t_l$
 $= 10^\circ\text{F}$

Evaporator capacity

 $= 4.0 \text{ TR}$

Correction factor from table

 $= 1.02$
