Fast, Easy Furnace Tuning

- Automatic Internal Pump
- Great for Installations & Servicing
- Easy Hands-free Operation
- Custom Fuel Types
- Field-replaceable O₂ Sensor
- Calculates Combustion Efficiency

For fast, accurate furnace tuning, the SOX3 Combustion Checker is the tool HVACR pros trust to get the right answers. It provides the essential readings needed to tune combustion equipment like measuring flue temp and %O₂, and calculating %CO₂, %EA, and combustion efficiency.

Test Tools HVACR Pros Trust

The Right Tool for Checking Combustion

Hands Free Solutions

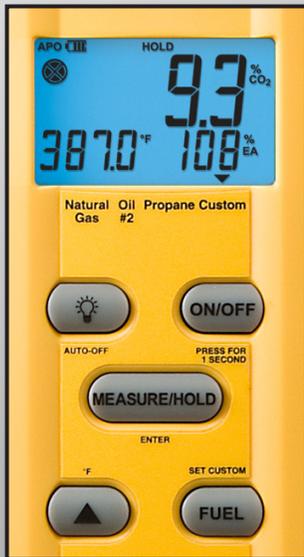

Strong magnetic hanger holds the meter in place while the threaded barrel-lock stabilizes the barrel without damaging the flue. And the internal pump means no more hand pumping.

Threaded barrel-lock to hold wand in place

Magnetic hanger on back of SOX3 for hands free testing

Custom Fuels

Just set your SOX3 to Custom, enter the %CO₂ max of any fuel, then measure normally. This screen was taken from a wood pellet burner.

Field-replaceable Sensor

Because the oxygen sensor is field replaceable, there is no need to send the SOX3 in for time consuming calibration. The display shows when it's time for a new O₂ sensor.

Pre-calibrated oxygen sensor easily snaps in and out
